

NEOFLEX-L

www.neoflex.com.tr

Install our container liner in any standard ISO container box and it is instantly converted into a dry bulk transport vessel. Using liners for bulk transport is the most cost-effective transport concept and the logistic and economically advantages are impressive.

NEOFLEX-L offers 20' and 40' liners made to our customers requirements. We design a container liner optimized to your loading system and your receivers unloading facilities. Each liner design is well supported by documented drawings and specifications.

Container liners are custom made from multi-layer, co-extruded polyethylene film containing a mix of LDPE and LLDPE for high strength and durability.

NEOFLEX-L is offered with various types of bulkhead design for the sake of meeting our clients' individual loading and unloading requirements.
